SUMMARY

Cybersecurity and AI student with a foundational understanding of network defense, cloud security concepts, and system administration. Hands-on experience developing projects in C++ and Python, with practical knowledge of database structures using SQL. Eager to leverage technical skills in Windows and Linux environments to support enterprise security operations and cloud security architecture.

EDUCATIONAL BACKGROUND

Faculty of Artificial Intelligence, Menofia University

Expected 2028

Student in Cyber Security (2024 – 2028)

PROJECTS

C++ Application & Development Projects

- Designed and built core software applications using C++ to solve algorithmic and logical tasks.
- Applied Object-Oriented Programming (OOP) concepts to construct clean, reusable, and structured code architectures.

Python & SQL Data Processing Utilities

- Developed script-based automation tasks in Python for system handling and basic security utilities.
- Formulated and executed SQL queries for structured relational database management, data extraction, and security checks.

TECHNICAL SKILLS

Security & Cloud:	Cybersecurity Fundamentals, AWS Cloud Security Principles
Operating Systems:	Linux Administration, Windows Administration
Programming:	C++, Python
Databases & Tools:	SQL

SOFT SKILLS

- Teamwork & Collaboration
- Time Management
- Self-Motivation & Continuous Learning

LANGUAGES

- Arabic:** Native
- English:** B2
